with ...

APACHE CON  
EUROPE

CORINTHIA HOTEL  
BUDAPEST, HUNGARY

— NOVEMBER 17-21, 2014 —

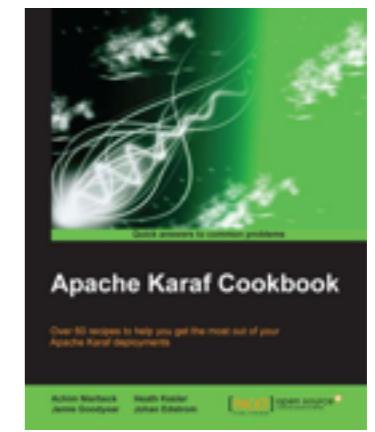

What needs to be done to run  
JEE like applications inside Karaf?

# @anierbeck

- Karaf PMC, Apache Member
- OPS4j Pax Web Project Lead
- Senior IT Consultant @codecentric
- co-Author of Apache Karaf Cookbook

## Agenda

- Enterprise Requirements
- OSGi with Karaf
- Enterprise Requirements on Karaf
- Specialties
- Http Service
- Cellar - or how to cluster Karaf
- Summary

# OSGi with Karaf

# OSGi - a very brief introduction

- Modular
- OSGi Bundles:
  - High Cohesion (One classloader/bundle)
  - Low Coupling (Package Import/Export)
  - Versioning per bundle ( [1.0,2,0) )
  - Service Registry

# What is Karaf

- Container
  - OSGi Applications
- Lightweight
  - expandable to Full Enterprise support
- Covers all major needs
  - Logging
  - Deployment
  - Configuration

```

To have this blueprint  
JNDI is needed

# JTA - Karaf

```
<blueprint default-activation=,,eager"
    xmlns="http://www.osgi.org/xmlns/blueprint/v1.0.0"
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
    xmlns:jpa="http://aries.apache.org/xmlns/jpa/v1.0.0"
    xmlns:tx="http://aries.apache.org/xmlns/transactions/v1.0.0"
    xsi:schemaLocation="http://www.osgi.org/xmlns/blueprint/v1.0.0
http://www.osgi.org/xmlns/blueprint/v1.0.0/blueprint.xsd">

    <bean id="cookBookServiceImpl"
        class="de.nierbeck.apachecon.persistence.dao.CookBookServiceImpl">
        <jpa:context property="em" unitname="cookbook" />
        <tx:transaction method="*" value="Required" />
    </bean>

    <service id="cookBookService" ref="cookBookServiceImpl"
        interface="de.nierbeck.apachecon.persistence.api.CookBookService" />
</blueprint>
```

# JTA - Karaf

```
<blueprint default-activation=,,eager"
    xmlns="http://www.osgi.org/xmlns/blueprint/v1.0.0"
    xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
    xmlns:jpa="http://aries.apache.org/xmlns/jpa/v1.0.0"
    xmlns:tx="http://aries.apache.org/xmlns/transactions/v1.0.
    xsi:schemaLocation="http://www.osgi.org/xmlns/blueprint/v1.0.0/blueprint.xsd">

    <bean id="cookBookServiceImpl"
        class="de.nierbeck.apachecon.persistence.dao.CookBookServiceImpl">
        <jpa:context property="em" unitname="cookbook" />
        <tx:transaction method="*" value="Required" />
    </bean>

    <service id="cookBookService" ref="cookBookServiceImpl"
        interface="de.nierbeck.apachecon.persistence.api.CookBookService" />
</blueprint>
```

To have this blueprint  
JPA and JTA is needed

# Client - Karaf

```
<?xml version="1.0" encoding="UTF-8"?>
<blueprint xmlns="http://www.osgi.org/xmlns/blueprint/v1.0.0"
    default-activation="lazy">

    <reference id="cookBookService"
        interface="de.nierbeck.apachecon.persistence.api.CookBookService" />

    <command-bundle xmlns="http://karaf.apache.org/xmlns/shell/v1.1.0">
        <command>
            <action class="de.nierbeck.apachecon.commands.CreateBook">
                <property name="bookService" ref="cookBookService" />
            </action>
        </command>
        ...
    </command-bundle>
</blueprint>
```

Demo

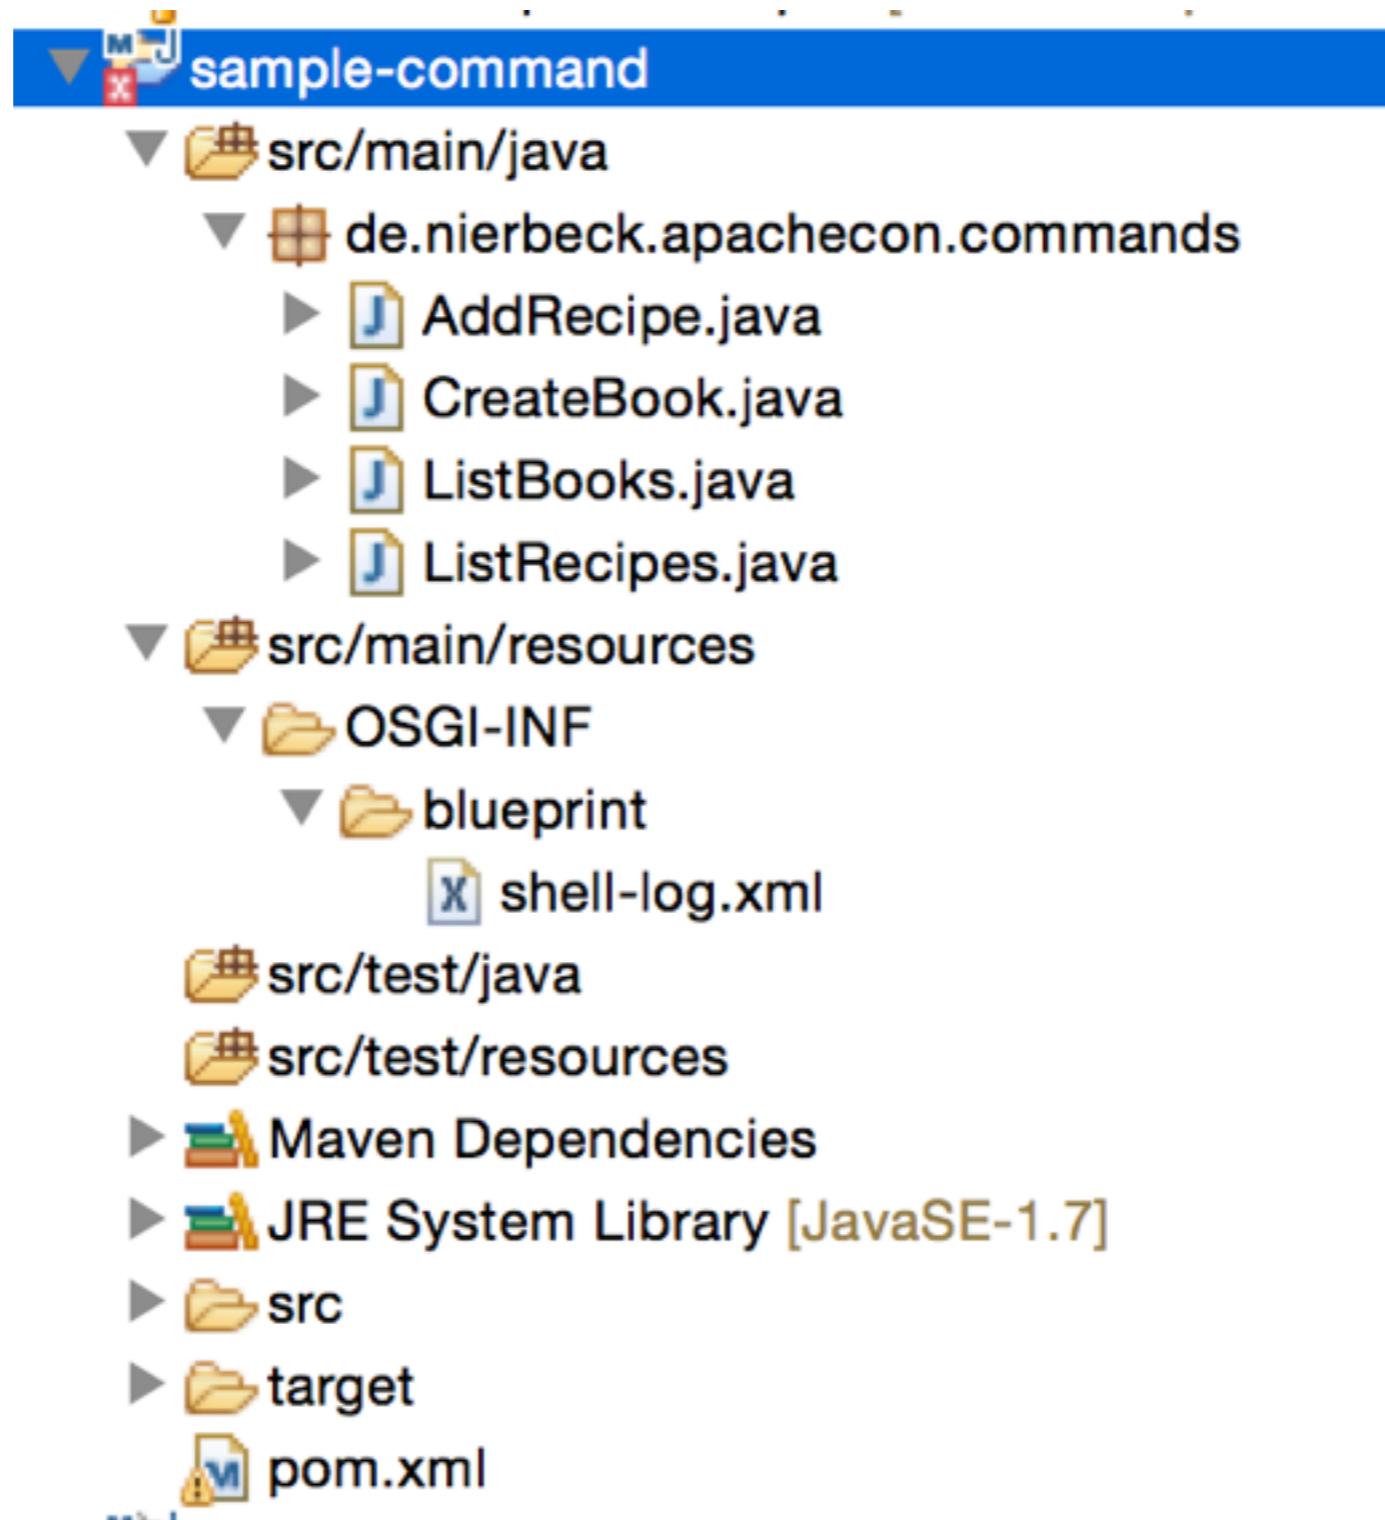

# Persistence

The screenshot shows the project structure for a Java Persistence application named "sample-persistence".

- src/main/java**: Contains three packages:
  - de.nierbeck.apachecon.persistence.api**: Contains `CookBookService.java`.
  - de.nierbeck.apachecon.persistence.dao**: Contains `CookBookServiceImpl.java`.
  - de.nierbeck.apachecon.persistence.entity**: Contains `Book.java` and `Recipe.java`.
- src/main/resources**: Contains:
  - META-INF**: Contains `persistence.xml`.
  - OSGI-INF**: Contains:
    - blueprint**: Contains `blueprint.xml` and `database.sql`.
- src/test/java**
- src/test/resources**
- Maven Dependencies**
- JRE System Library [JavaSE-1.7]**
- src**
- target**
- pom.xml**

```

Http Service  
with ...

# HTTP Service

- Using an Activator:

```
final HttpContext httpContext = httpService
    .createDefaultHttpContext();
// register the BookServlet

// first wait for the DAO-Service
CookBookService cookBookService;
ServiceReference<CookBookService> serviceReference = bundleContext
    .getServiceReference(CookBookService.class);
cookBookService = bundleContext.getService(serviceReference);

//now create the Servlet
ViewBookServlet viewBookServlet = new ViewBookServlet();

//set the DAO to the Servlet
viewBookServlet.setCookBookService(cookBookService);

final Dictionary<String, Object> initParams = new Hashtable<String, Object>();
try {
    httpService.registerServlet("/book", // alias
        viewBookServlet,
        initParams, httpContext);
```

# Whiteboard

- Using the whiteboard approach via Activator

```
public void start(BundleContext bc) throws Exception {  
    bundleContext = bc;  
  
    // first wait for the DAO-Service  
    CookBookService cookBookService;  
    ServiceReference<CookBookService> serviceReference = bundleContext  
        .getServiceReference(CookBookService.class);  
    cookBookService = bundleContext.getService(serviceReference);  
  
    // create new Servlet  
    ViewBookServlet cookBookViewServlet = new ViewBookServlet();  
    cookBookViewServlet.setCookBookService(cookBookService);  
  
    registerService = bundleContext.registerService(Servlet.class,  
        cookBookViewServlet, null);  
}
```

# Whiteboard

- Using the whiteboard approach via Blueprint

```
<blueprint default-activation="eager">

    <reference id="cookBookService"
        interface="de.nierbeck.apachecon.persistence.api.CookBookService" />

    <bean id="viewBookServlet"
        class="de.nierbeck.apachecon.view.ViewBookServlet" >
        <property name="cookBookService" ref="cookBookService"/>
    </bean>

    <service id="servletService" interface="javax.servlet.Servlet"
        ref="viewBookServlet" />
</blueprint>
```

# Servlet 3.0 - Just annotation

```
@WebServlet(urlPatterns = "/book")
public class ViewBookServlet extends HttpServlet {

    /**
     *
     */
    private static final long serialVersionUID = 1L;

    @Inject
    @OsgiService
    CookBookService cookBookService;

    @Override
    protected void doGet(HttpServletRequest req, HttpServletResponse resp)
        throws ServletException, IOException {
        ...
    }
}
```

A photograph of a person sitting alone in a dark, curved concrete tunnel. The person is sitting on the floor, hunched over with their head down, appearing distressed or lost. The tunnel walls are made of large, light-colored concrete blocks. A single yellow line runs along the floor from the foreground towards the exit at the end of the tunnel. The exit leads to a dark area with some distant lights visible.

# JEE with Karaf?

- Adoptions needed? **YES**
  - Minor on Persistence - **JNDI lookup**
  - Minor on transaction - **Blueprint JTA**
  - Wiring of Services:
    - Use Blueprint
    - Use Servlet 3.0 with CDI - **@OsgiService**
- Session Replication throughout cluster, it's still standard Hazelcast
